THIS IS UNEVALUATED INFORMATION

1. Arkona radar station on Rugen Island. On 11 and 20 September 1954, a Token-type radar set was observed on the highest point of Rugen Island north of Arkona, near Gellort. The set had a free field of operation on all sides. Near the set were 3 special trucks with several cable lead-ins. The Token-type set was mounted on a four-wheel carriage and was being guarded by sentries wearing naval uniforms. No activity was observed. The operating personnel consisting of about 25 naval soldiers were quartered in Wick buildings south of Gellort.

25X1

2. Hagenow radar station. The following observations were made between early August and 10 October:

25X1

Early August. The radar station still consisted of 1 Token-type set, 1 Kniferest-type set, and 2 Fishnet-type sets. The Kniferest-type set usually operated between 1800 and 1900 and the Token-type set between 1900 and 0700. It was repeatedly observed that the Token-type set operated simultaneously with the Kniferest-type set, but never longer than 1 hour. Trucks and radio truck were seen in communication with the installation.

25X1

15 August. About 0800, the Token-type set was partially dismantled. The dipoles fitted on the reflectors were screwed off and the reflectors were dismantled by means of a hoisting gear mounted on a truck. They were subsequently loaded onto a single-axle van-like trailer. The set was then hauled to the former Fliegerhorst Kaserne. The remaining box of the set was also hauled to the barracks installation on a caterpillar tractor. Dismantling work was completed by 1800. The Fishnet-type set or the Kniferest-type set were not changed nor have been seen in operation prior to 15 August.

16 August. Between 0900 and 1300, two Dumbo-type sets were being set up without the help of a truck with hoisting gear. Two trucks were parked near each set. At 1300, one of the two sets began to operate making constant rotations.

20 August. The second Dumbo-type set which was never seen operating had been dismantled, while the other Dumbo-type set continued to rotate.

24 August. At about 1600, the Token-type set was towed from the barracks installation to the radar station and set up.

25 August. During the morning, dipoles were being screwed on the mounted reflectors. The set was in operation at 1900.

25X1

25X1

1 to 17 September. The Token-type set was in operation from about 2200 to 0600, while the Dumbo-type set operated daily from 0600 to 2200 with two one-hour pauses, approximately from 1200 to 1300 and 1930 to 2030. The Kniferest-type set simultaneously operated with the Dumbo-type set, but made pauses at irregular intervals. The two Fishnet-type sets did not rotate as was previously observed. Construction work was under way on a brick building, about 8 x 10 meters, about 200 meters northwest of the radar station.

3 to 10 October. The radar station still consisted of 1 Token-type set, 1 Kniferest-type set, 1 Dumbo-type set and 2 Fishnet-type sets. The sets operated irregularly. The Dumbo-type set operated repeatedly during the morning up to about 1200, sometimes simultaneously with the Kniferest-type set. The latter set never operated alone. When the Dumbo-type set stopped at about 1200, the Token-type set repeatedly began operating and continued until the evening. The two Fishnet-type sets always stood still. Holes for the vehicles belonging to the sets were being excavated at the radar station. 2

3. Ludwigslust/Techentin radar station. Between 1400 and 1700 on 29 September, the previously reported radar station near Ludwigslust/Techentin airfield was observed. The installation was located on a slight elevation of about 150 meters, north of the road leading to Karstedt. Since it could be observed good from the west, it was noted that the radio trucks were covered with camouflage nets. A prime mover was also seen a short distance away. A row of masts with 5 lines extended from the camouflaged vehicles toward the north. A Kniferest-type radar set and a Fishnet-type set were seen about 100 meters north of the site with the vehicles. Near these sets were also radio trucks covered with camouflage nets. The lines extended aft of this site toward the former Fliegerhorst Kaserne. At 1630, the Kniferest-type set was in operation. It made one rotation in a counter-clockwise direction within 10 seconds.
- sketch of the station. No change was seen on the radar station on 3 November 1954. 3

4. Perleberg radar station. The previously reported radar station at Perleberg airfield on the road leading to Suekow was improved on 12 October. About 50 soldiers wearing black-bordered black epaulets were observed there. The following radar sets were available: 1 Token-type set, 1 Kniferest-type set, 2 Fishnet-type sets, and 2 steel masts about 6 meters high and braced by 2 guy wires. A radio truck was parked near each mast. An additional 2 radio trucks and 1 prime mover with a trailer were seen in the area. The operating personnel were quartered in 3 tents, each with a capacity of 10 to 15 men. A telephone line extended from the station into the barracks installation formerly occupied by drivers. The sets were not in operation on the day of observation. 4

5. Gardelegen radar station. The following observations were made with regards to the radar station near the Remonte School in Gardelegen between 4 August and 15 October 1954:

4 August. The radar station was removed and the sheds there partially torn down. Only the poles for the lines leading to the former Remonte School were still seen.

15 September. The radar station was at its previous location. The former wooden sheds were replaced by 3 earth bunkers, including 2 for motor vehicles. The following sets were seen in the installation: 1 Token-type set, 1 Kniferest-type set, 2 Fishnet-type sets and 1 umbrella-type antenna. Four radio trucks were seen in the area.

15 October. No changes were observed in the radar station, except that the umbrella-type antenna had been shifted to the eastern edge of the installation. The Token-type set continuously operated, making 1 rotation in 5 or 6 seconds. No aircraft were seen aloft. Soldiers wearing blue-bordered black epaulets were seen in the installation. No remarkable changes were observed in the Remonte School, which was guarded by sentries wearing red-bordered black epaulets without insignia. Soldiers who wore black-bordered black and blue-bordered black epaulets were also seen. The billets were fully occupied by about 150 men. Two broom-shaped antennas were seen on the roof of the quartering building on Bismarck Strasse to which the cables from the radar station extended. A triangular frame antenna was also seen on the roof of this building. 5

6. Quedlinburg radar station. While passing on the road from Quedlinburg to Hedersleben on 22 September, a Token-type set was observed 1 km east of this road in line with Difort, about 1 km north of triangulation point 137. The set slowly rotated in a clockwise direction. About 100 meters southwest of this set were 1 Kniferest-type set and 1 Fishnet-type set. Two large trucks with closed superstructures and 2 radio trucks were also seen. 6

25X1

7. Wittenberg radar station. On 26 October, a Token-type set was still observed on Apollenberg (Hill) near Wittenberg. The set rotated in a clockwise direction, making one rotation in about 20 seconds. Two van-like trucks and a temporary building were also seen in the area which could not be entirely observed. 7

25X1

25X1

8. Eberswalde radar station. About 1630 on 14 October, a radar station was still observed on Hill 72 about 700 meters east-northeast of the Artillerie Kaserne in Eberswalde. The installation was surrounded by a wire fence. 8
9. Jueterbog-Damm radio installation. During the spring of 1954, tinfoil (chaff) of various sizes was found on a field of about 20 hectares along the highway leading from Jueterbog-Damm to Bochow. One tinfoil was secured on 10 September. On 15 October, tinfoil was again seen in the described area. The tinfoil was of various sizes; 20, 40 and 60 cm long and about 2 cm wide. 9
10. Beeskow radio installation. On 7 July, a radio installation of four masts with a small cabin in the middle was seen 200 to 300 meters east of the Muellrose-Beeskow road, just south of Ogeln and north of the Beeskow-Schneeberg railroad line. 10
1. Comment. The Token-type radar set near Arkona on Rugen Island is reported for the first time. For tabulation of radar stations in the Soviet Zone of Germany known from available information, see Annex 1. 25X1
2. Comment. The Hagenow radar station was reinforced by a Dumbo-type set. This is the first detailed information on the dismantling of a Token-type set. 25X1
3. Comment. The radar station near Techentin was observed for the first time on 30 June 1954. . For sketch of radar station, see Annex 2. 25X1
25X1
4. Comment. The Perleberg radar station is apparently unchanged. 25X1
5. Comment. It is unknown whether the sets were temporarily withdrawn from the Gardelegen radar station or whether an exchange of personnel and equipment took place. It is believed that the sets in the radar stations are operated by signal troops who wear black-bordered black or blue-bordered black epaulets.
3. Comment. According to available information, the radar station near Eberswalde consists of 1 Token-type set, 1 Fishnet-type set and 1 Dumbo-type set. 25X1
6. Comment. The Quedlinburg radar station has not been changed. 25X1
7. Comment. The radar station on Apollensberg presumably belongs to the headquarters of the southern Ftr Corps of the Twenty- Fourth Air Army which is stationed in Wittenberg.
9. Comment. A previous report mentioned that tinfoil had been found near Jueterbog-Damm in April 1954. . The tinfoil found on 10 September 1954 was 32 cm long and 4 cm wide. 25X1
25X1
10. Comment. This radio installation of four masts is reported for the first time. 25X1
